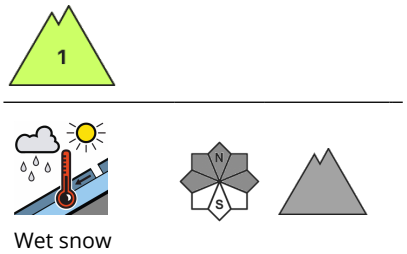
Danger Level 1 - Low



Increasing snow cover also on the north side

The avalanche risk is low. Wet snow is the problem. In extremely steep terrain, loose snow avalanches can occasionally come loose. Wet gliding avalanches can occur on steep slopes with smooth ground that have not yet been discharged. Avalanche activity is limited to terrain on shady slopes where there is still snow. Wet avalanches usually remain small.

Snowpack

The remaining snowpack is completely soaked, the meltwater runoff hardly decreases even overnight. The southern sides are largely snowed out.

Tendency

The avalanche danger remains low.
